Australia's Air Travel Recovery

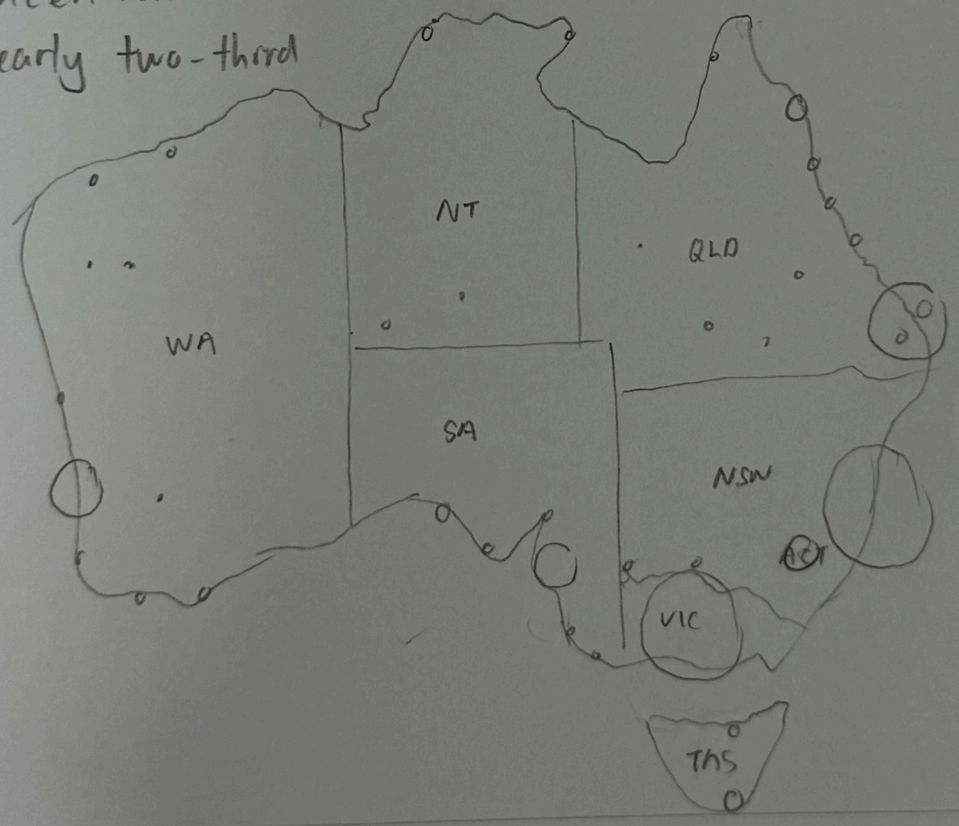

Passenger movements returned to 2019 levels.
Airport and routes recovered unevenly.

164.4M	+0.2%	42.6M	8.1M

1. Air travel returned, but recovery varied
Air travel plunged in 2020, then recovered

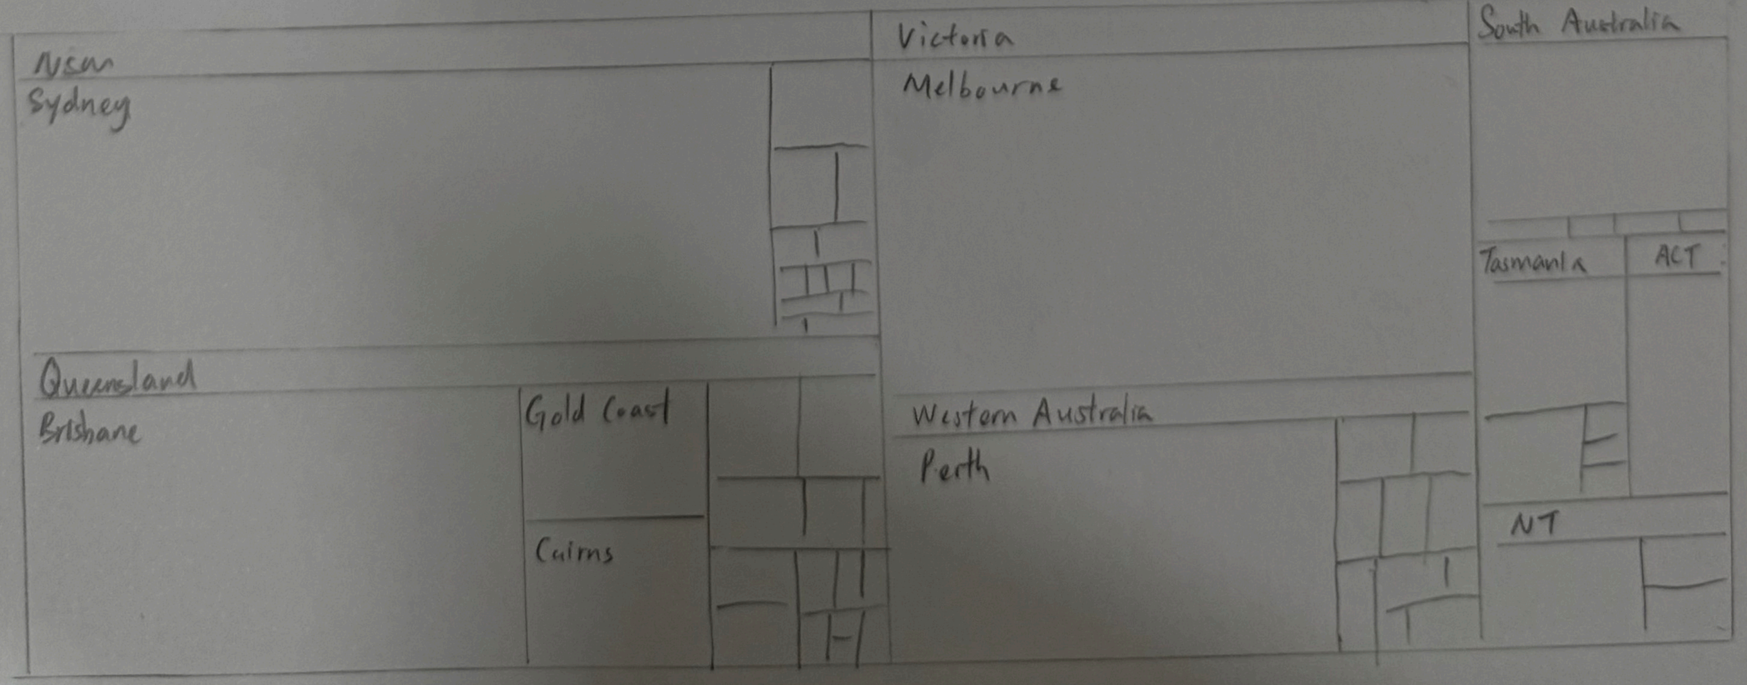

2. Where is air travel concentrated?
Three airports handled nearly two-third traffic.

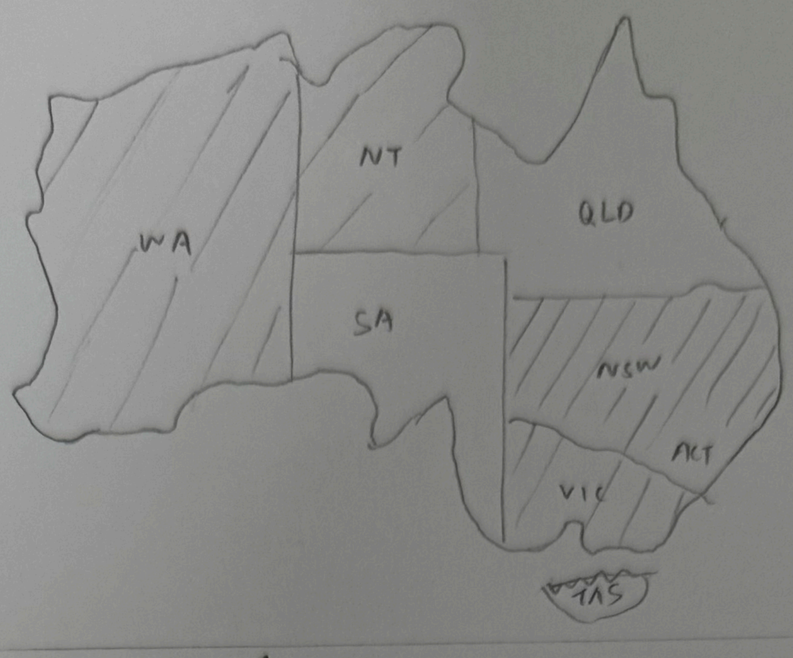

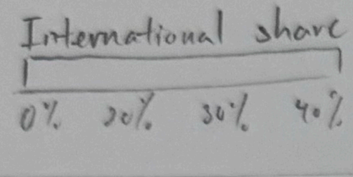

Passenger movements
- 0M
- 10M
- 20m
- 30m
- 40m

How concentrated is traffic within each state

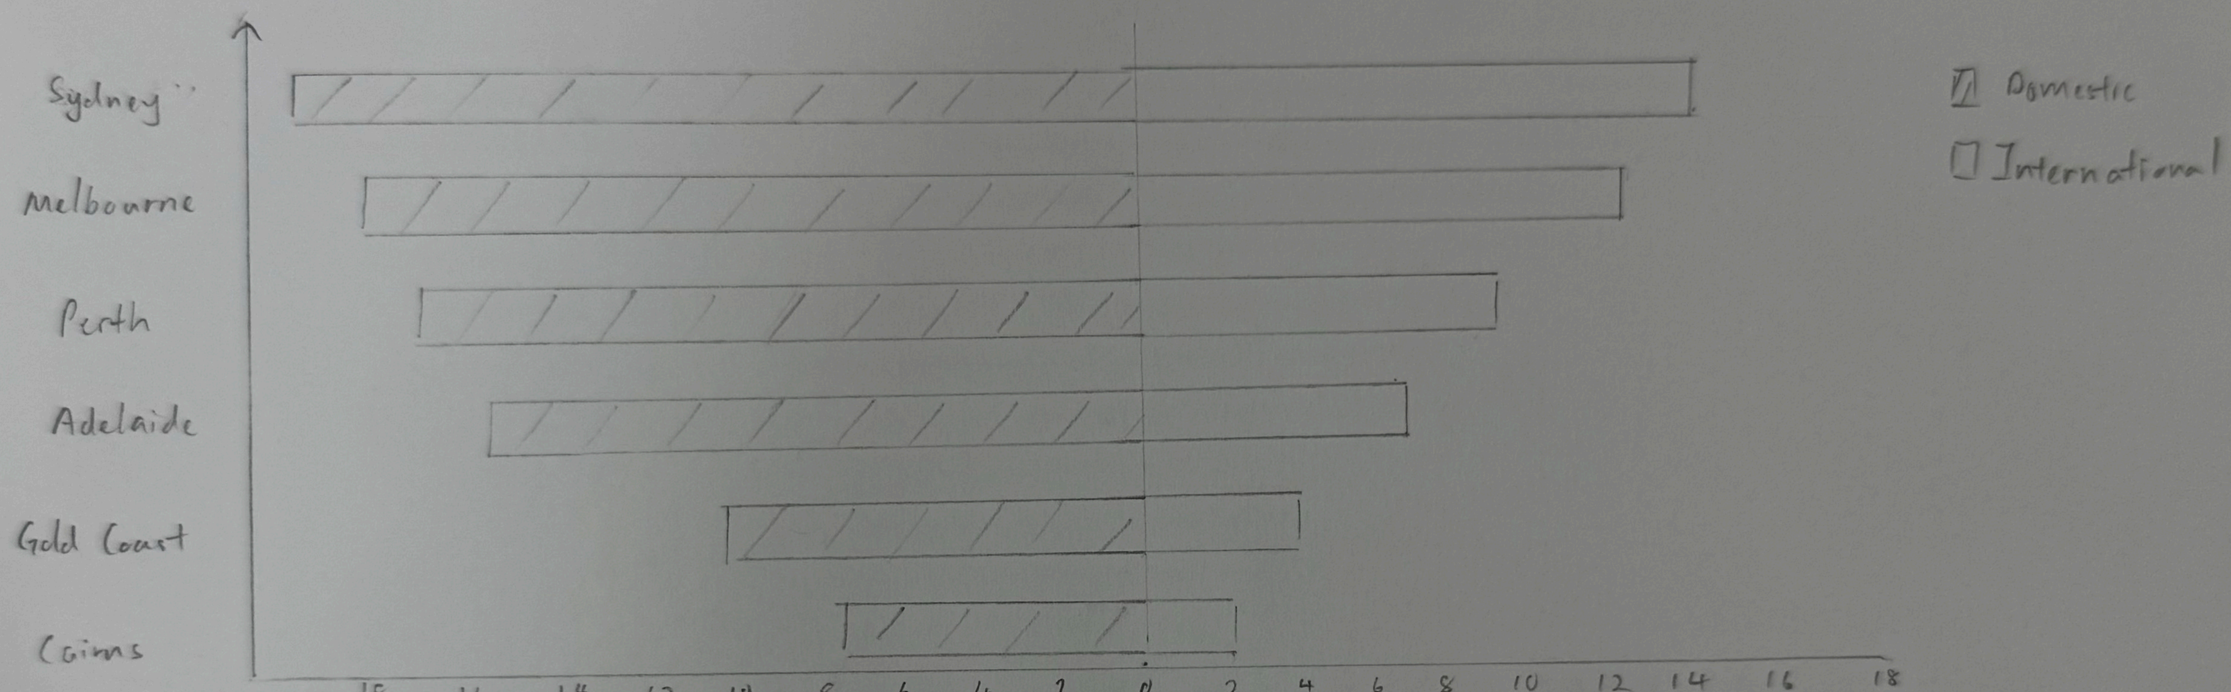

3. How does the passenger mix vary?
Which states have the largest international share

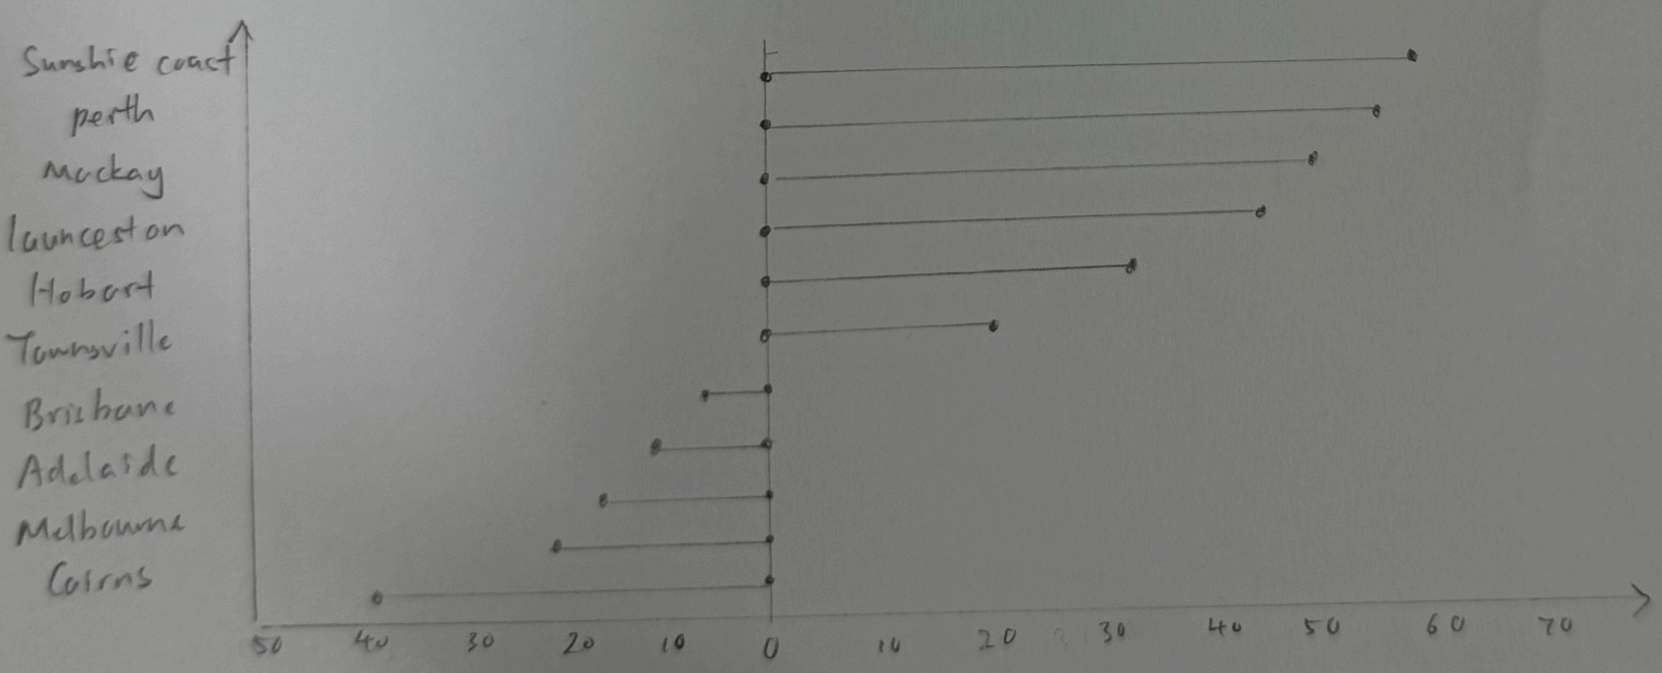

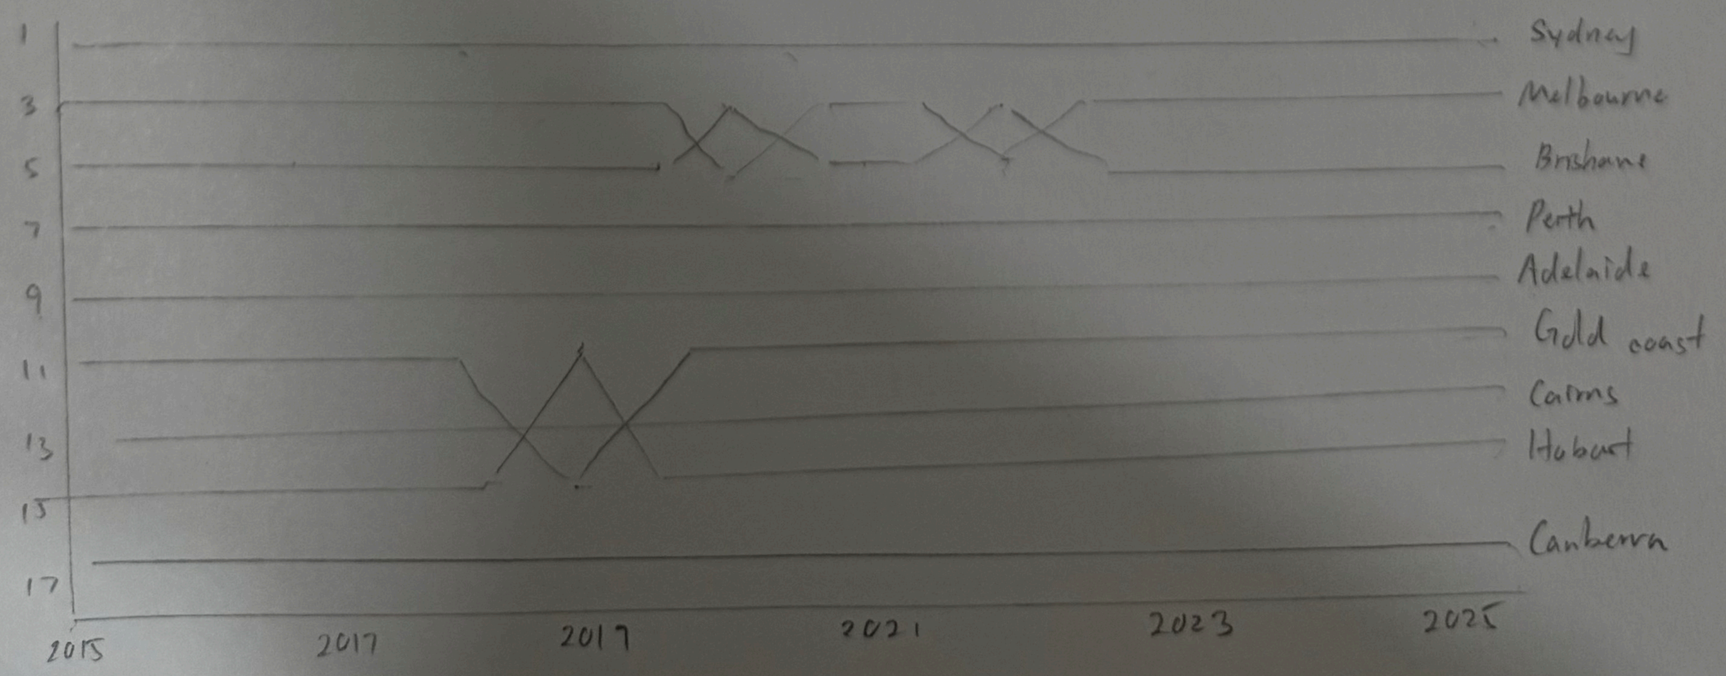

How do domestic and international totals compare?

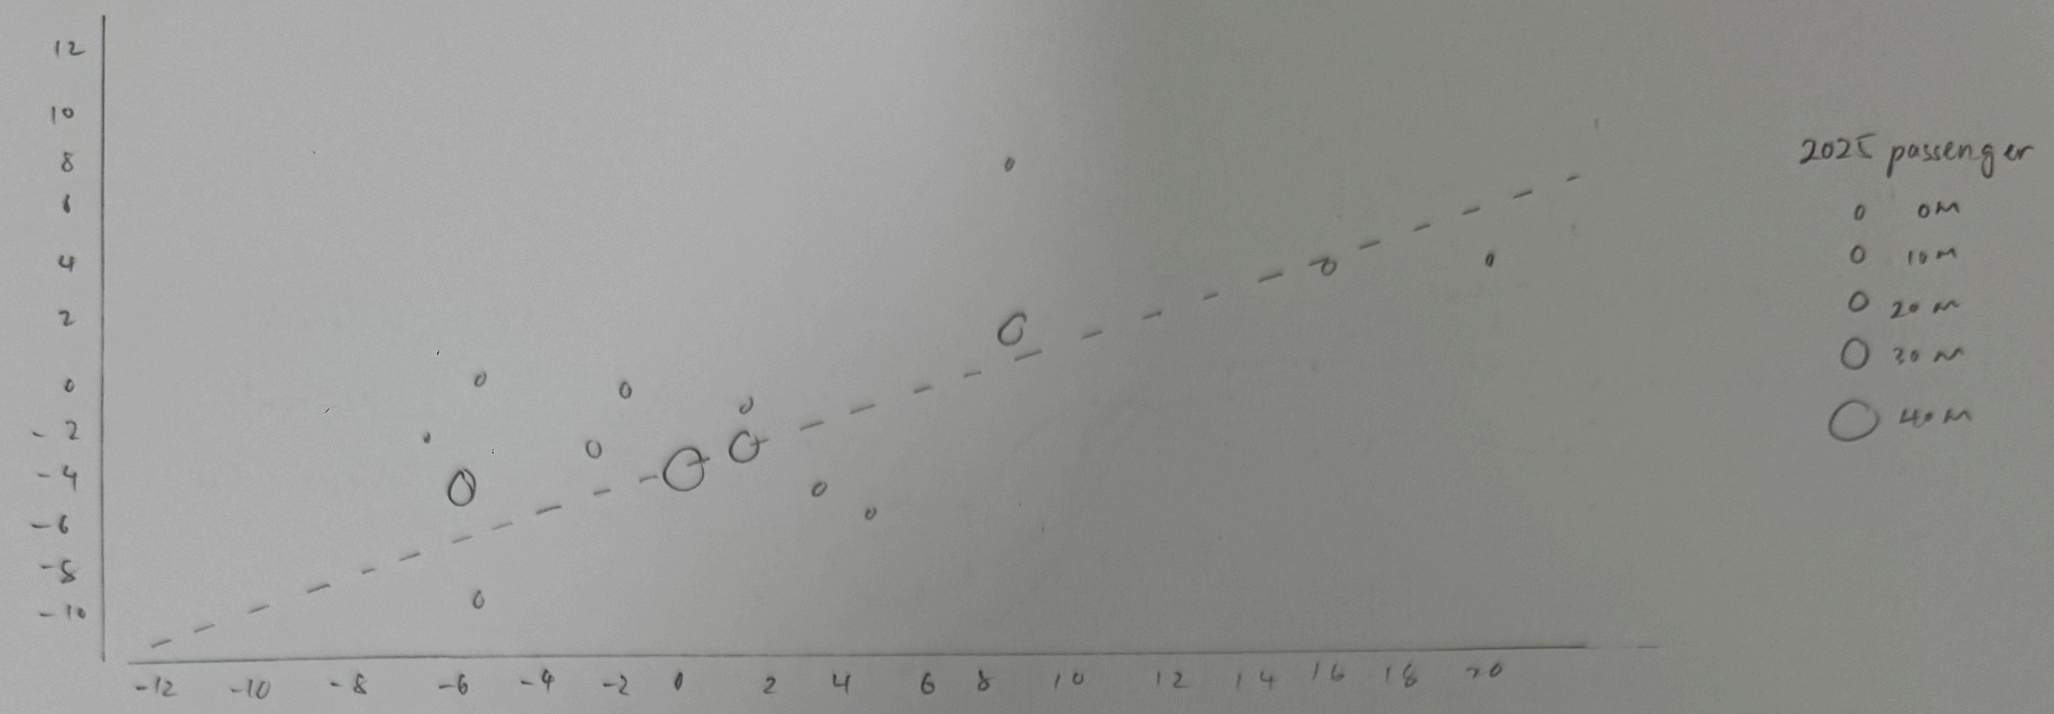

4. How did airports recover and differ?
Which airports exceeded their 2019 passenger total

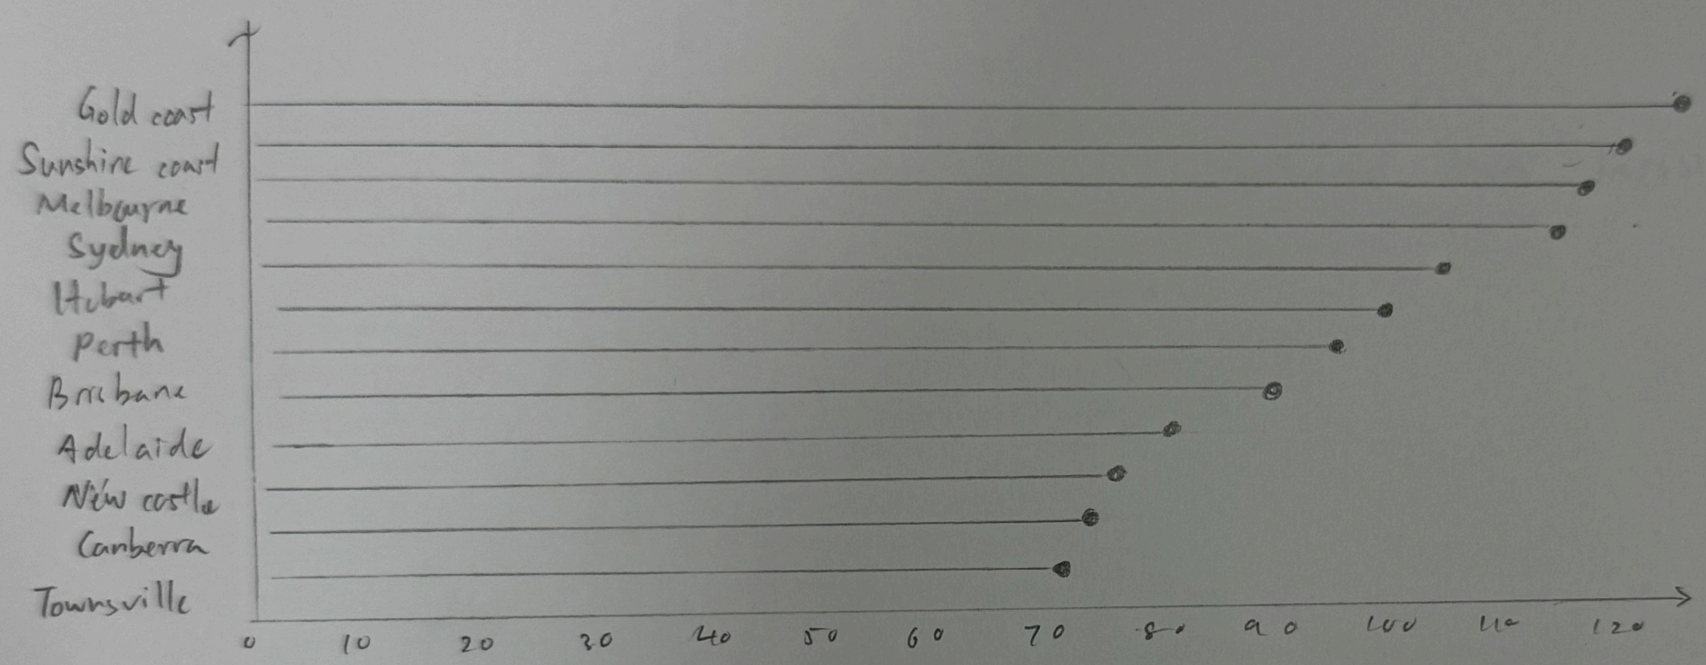

How did airport passenger ranking change?

Where did passenger traffic outpace aircraft activity

Passenger movements per aircraft movement varied.

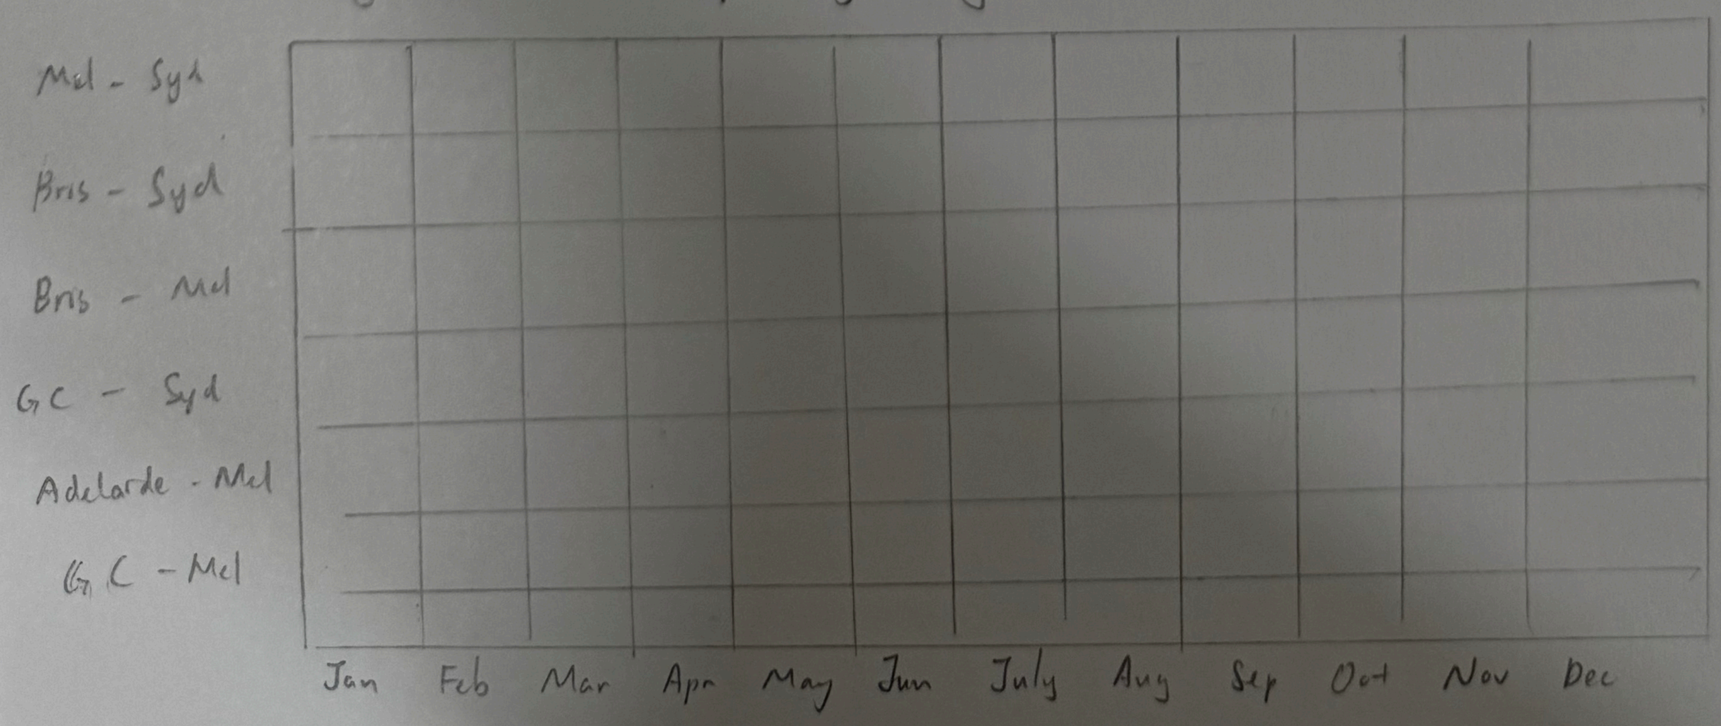

5. Which routes recovered and which did not

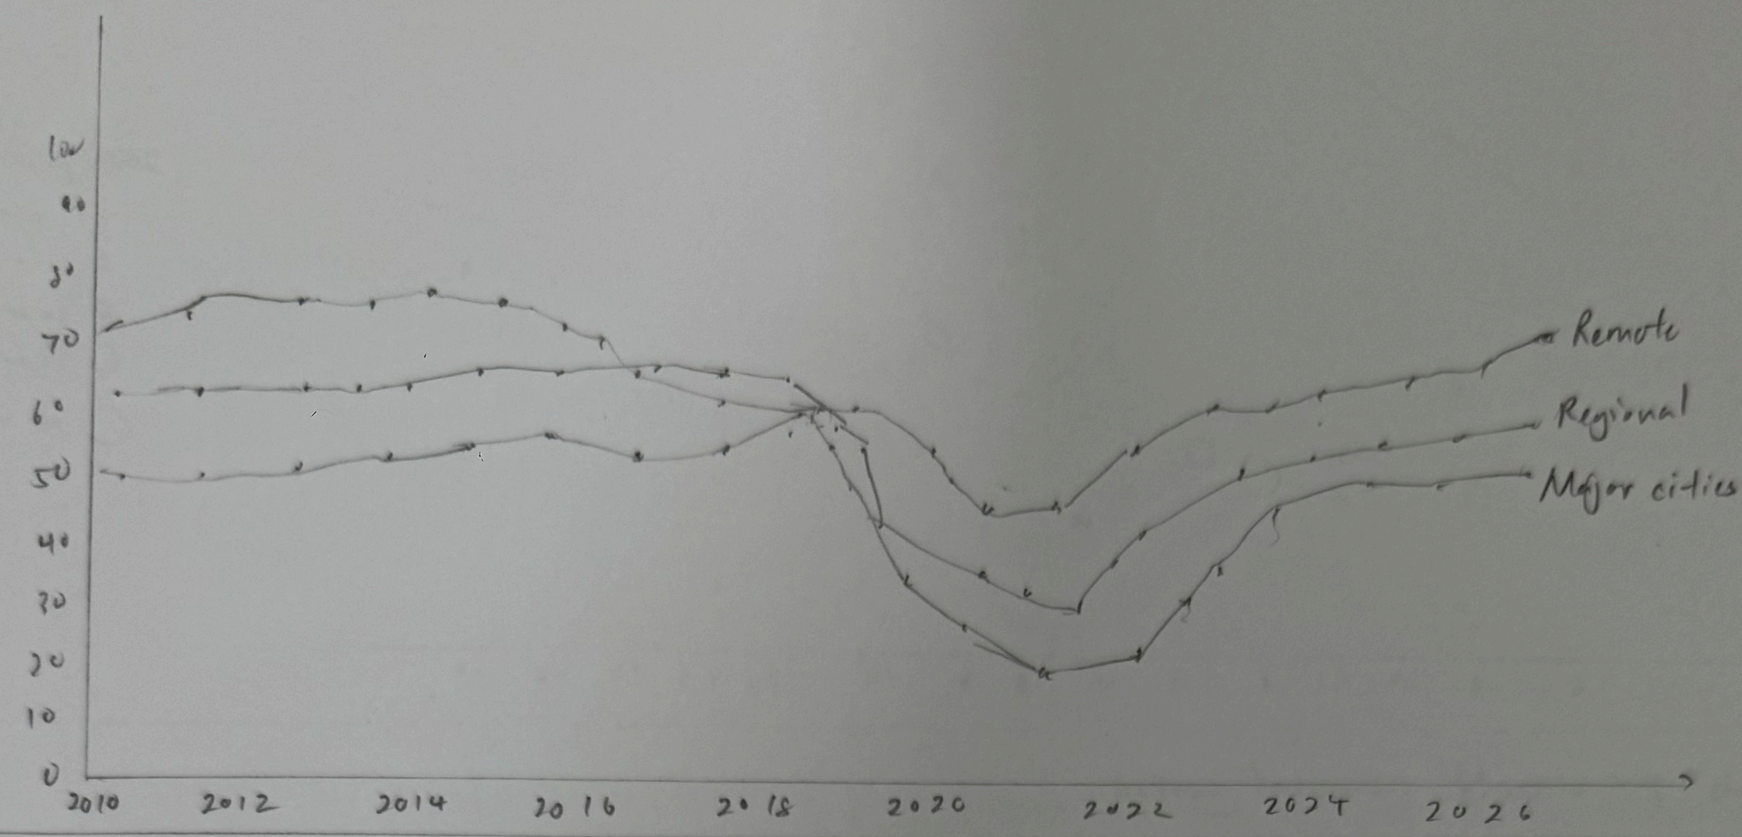

Melbourne - Sydney led domestic route

Which route gained or lost passengers by month ?

Did major city, regional and remote routes recover alike?

Conclusion

Recovery was national, but uneven
